# Everything you need to know about Ebola

Health officials are fighting to contain an outbreak in Congo.  
By Morgan Winsor and Gillian Mohney  
30 August 2019, 16:50 • 16 min read

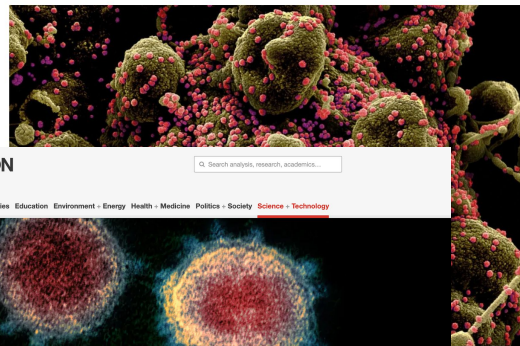

The Ebola virus is one of a group of viruses that cause a deadly kind of hemorrhagic fever, which leads to uncontrollable bleeding inside and outside the body.

What is Ebola?  
The Ebola virus is one of a group of viruses that cause hemorrhagic disease.

# F.D.A. Approves First Coronavirus Antibody Test in U.S.

Such a test may help scientists learn how widespread the infection is, and how long people remain immune after recovering.
